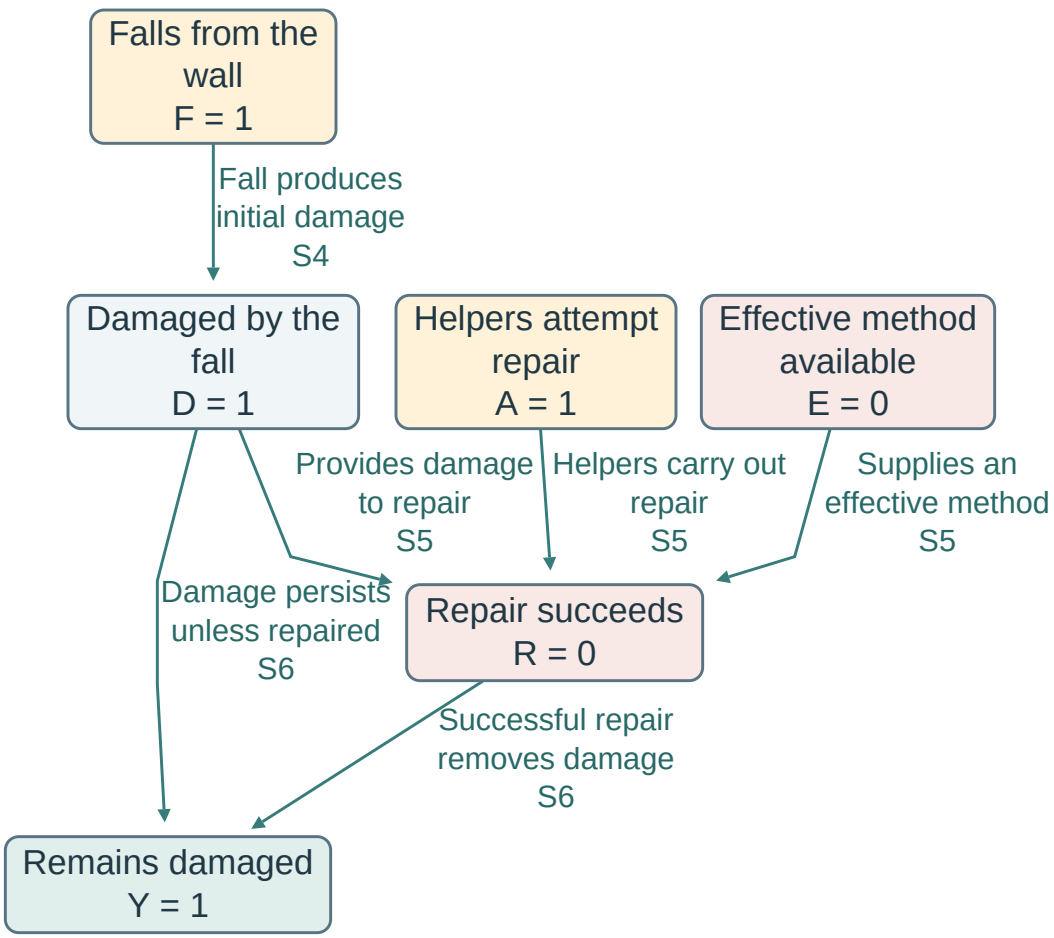
Humpty Dumpty

Controlled adaptation | Author reference model

Generated first attempt and repair failed validation; this is not a generated SCM.



Assumed rules

Added sentences define these exact functions.

D = F

S4

R = D & A & E

S5

Y = D & !R

S6

& together | either
! absence / negation
0 absent 1 present

Amber: boundary input
Pink: factual value 0
Teal: endpoint outcome

How the factors work together

Repair succeeds only with damage, an attempt, and an effective method together. Remaining damage requires initial damage and no successful repair.

Failed help does not mean all repair is impossible. An available effective method changes the outcome only when repair is attempted.

Natural version: a different repair remains untested; permanent irreparability is not established.

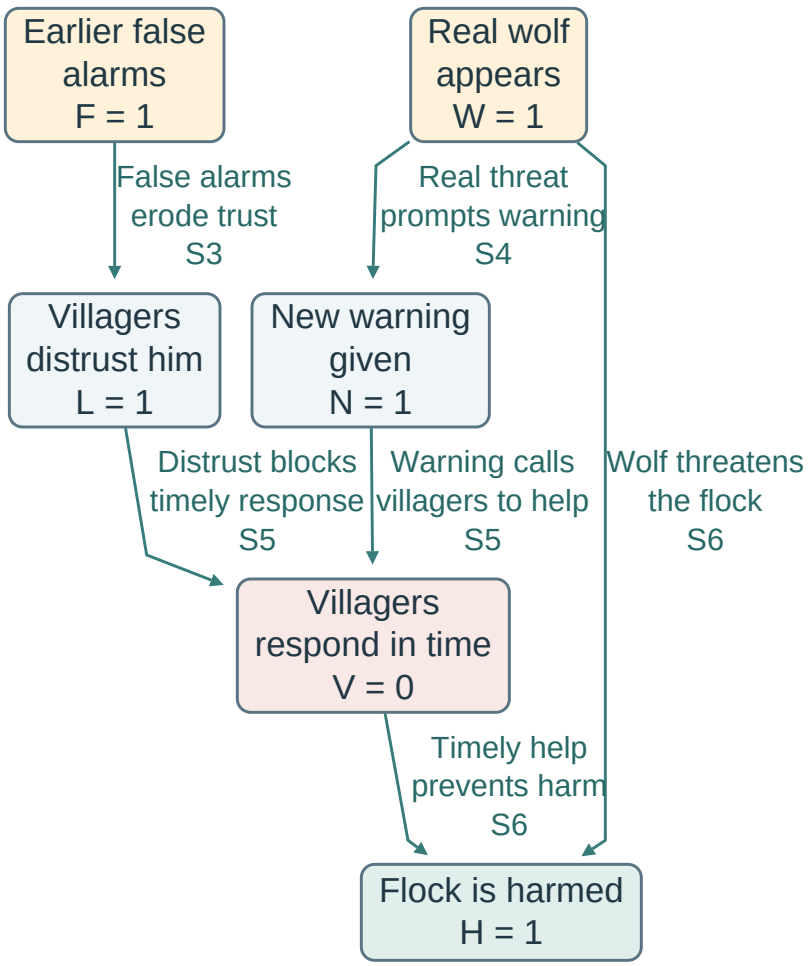
Sentence references point to frozen.json. Rules are author assumptions, not claims about every telling.

Exact reference execution: four frozen questions checked. Generator failures remain in the comparison table.

The Boy Who Cried Wolf

Controlled adaptation | Author reference model

Generated first attempt and repair failed validation; this is not a generated SCM.



Assumed rules

Added sentences define these exact functions.

L = F
S3

N = W
S4

V = N & !L
S5

H = W & !V
S6

& together | either
! absence / negation
0 absent 1 present

Amber: boundary input
Pink: factual value 0
Teal: endpoint outcome

How the factors work together

A new warning and retained trust are jointly required for timely response. A real wolf harms the flock only without that response.

Restoring credibility helps only if the new warning is still given. Removing the warning alone leaves the factual harm unchanged.

Natural version: the text leaves timing and the protective effect of hypothetical help unresolved.

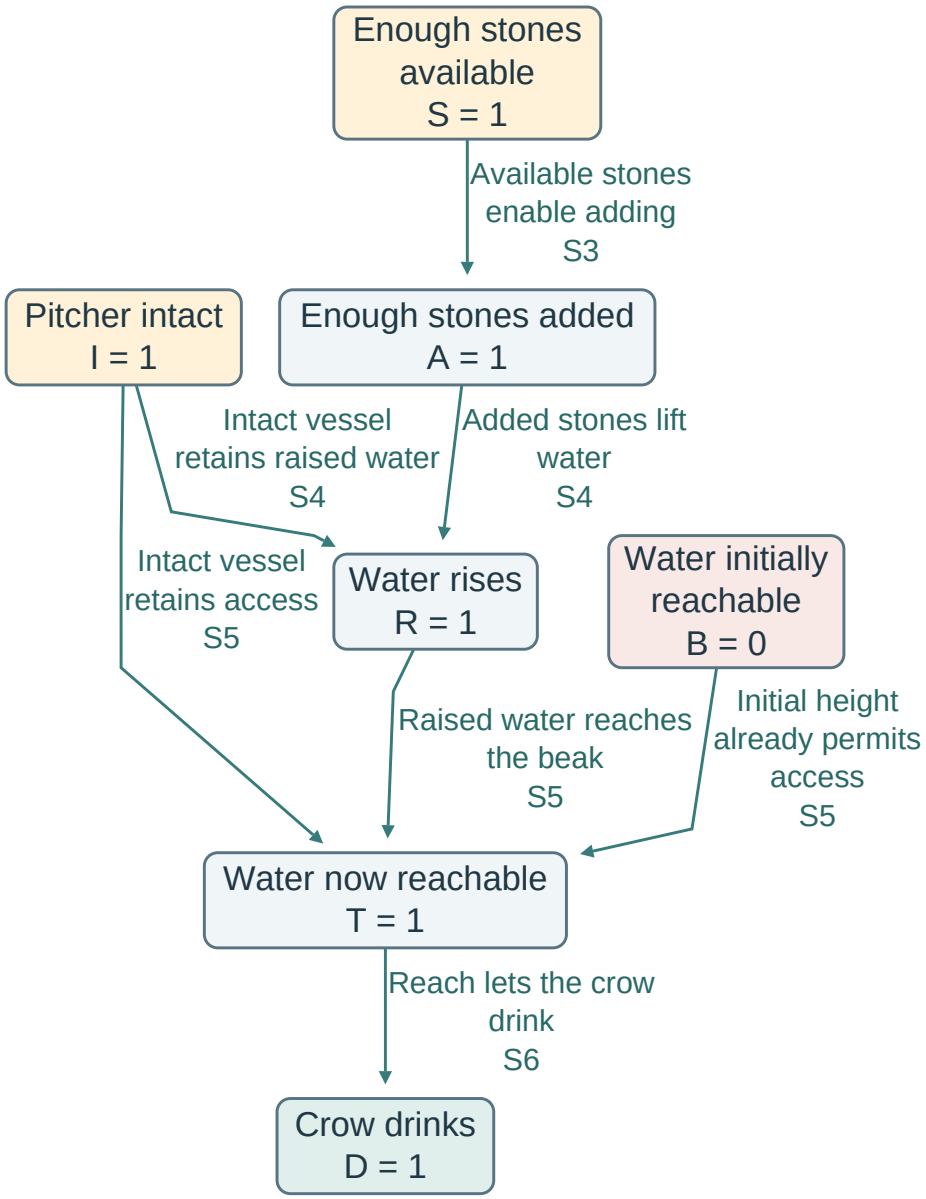
Sentence references point to frozen.json. Rules are author assumptions, not claims about every telling.

Exact reference execution: four frozen questions checked. Generator failures remain in the comparison table.

The Crow and the Pitcher

Controlled adaptation | Author reference model

Generated first attempt and repair failed validation; this is not a generated SCM.



Assumed rules

Added sentences define these exact functions.

A = S
S3

R = I & A
S4

T = I & (B | R)
S5

D = T
S6

& together | either
! absence / negation
0 absent 1 present

Amber: boundary input
Pink: factual value 0
Teal: endpoint outcome

How the factors work together

An intact pitcher and added stones raise the water. With the pitcher intact, initial reachability and raised water are alternative routes to drinking.

Enough stones are not universally necessary: water already within reach permits drinking without them. Sufficient water and readiness to drink stay fixed.

Natural version: this successful sequence does not identify what happens with a leaking pitcher.

Sentence references point to frozen.json. Rules are author assumptions, not claims about every telling.

Exact reference execution: four frozen questions checked. Generator failures remain in the comparison table.
